

The Feasa High Brightness Analyser is an innovative solution for testing multiple LEDs simultaneously for Color and Brightness. There are two Models – Feasa I(ICT) and Feasa F(Functional). These can be ordered in 3, 5, 10 and 20 Channel configurations. This Led Analyser in conjunction with Optical Heads can measure up to 10,000 Lumens.

When choosing which Model is most suitable for your application there are a number of issues to consider. In this regard the choice of Interface is important.

|                                  | <u>Feasa I</u> | <u>Feasa F</u> |
|----------------------------------|----------------|----------------|
| USB                              | NO             | YES            |
| RS232                            | YES            | YES            |
| 20 Pin Port – Frequency Out      | YES            | NO             |
| 20 Pin Port – Synchronous Serial | YES            | NO             |
| Daisy Chain                      | NO             | YES            |
| External Trigger Input           | YES            | NO             |

**USB** offers a simple interface to the LED Analyser with no requirement for an additional power supply. Baud rates up to 921600 baud are available, default 57600.

The **RS232 Serial Port** is easy to use with a max baud rate of 115200. It requires the use of an external power supply.

The **20pin ICT Port** can be used in either Frequency Out or Synchronous Serial Mode.

- **Frequency Out**  
The Frequency Out protocol can be used where access to an RS232 Serial Port is not available. Three frequencies are used to represent the Color and Intensity of the LEDs.
- **Synchronous Serial Port**  
The Synchronous Serial protocol is suitable when tester resources are limited or no other options are available.

### Daisy Chain

Multiple LED Analysers can be connected together using the Daisy Chain Connectors. Only one RS232 Serial Port or USB Port is required to connect up to 30 LED Analysers.

### External Trigger Input

The Feasa I provides an External Trigger Input which can be used to synchronise LED measurements with an external event such as an LED switching on.

## TEST TIME

The speed of the test is dependent on the intensity of the LEDs being tested, i.e. Bright LEDs have a shorter Test Time, Dimmer LEDs have a longer Test Time.

The capture (measurement) of up to 20 LEDs is done in parallel and can be achieved in times as fast as 102ms depending on the Intensity (Brightness).

The data is read back from each fiber sequentially and takes approximately 5ms per fiber, for example:

### **Ultra High Bright LEDs**

- 1 LED - Capture Time is 2ms and Read Back is 5ms, Total 7ms
- 20 LEDs - Capture Time is 2ms and Read Back is 100ms, Total 102ms

### **Dim LEDs**

- 1 LED - Capture Time is 650ms and Read Back is 5ms, Total 655ms
- 20 LEDs - Capture Time is 650ms and Read Back is 100ms, Total 750ms

## USB / RS232 SERIAL PORT – TEST CAPTURE TIMES

| Range                     | Capture Time |
|---------------------------|--------------|
| C (Auto Capture)          | 350ms        |
| C1 (Low Intensity)        | 650ms        |
| C2 (Medium Intensity)     | 200ms        |
| C3 (High Intensity)       | 22ms         |
| C4 (Super High Intensity) | 4ms          |
| C5 (Ultra High Intensity) | 2ms          |

The Read Back Time per fiber is always approximately 5ms.

For ICT the Capture Times are the same as USB/RS232 Serial Port. However, the Read Back Times are dependent on the frequencies being measured. Using an Agilent i3070 the Read Back Times are 400ms to 700ms approximately.

## DRIVERS/SOFTWARE

Feasa provides a comprehensive suite of Drivers and Software for ease of use.

|                                      | <u>Feasa I</u> | <u>Feasa F</u> |
|--------------------------------------|----------------|----------------|
| Test Models for Agilent i3070        | YES            | NO             |
| Test Code for Teradyne               | YES            | NO             |
| DLL used for Testing                 | YES            | YES            |
| Programming examples in Labview, C++ | YES            | YES            |

In addition, Feasa also provides a number of programmes to allow for the most efficient and appropriate use of the analyser.

## APPLICATIONS

### Indicator LEDs

- RJ45 Connectors
- Display Panels
- Emergency Signals
- Traffic Lights
- Railway Signals

### Automotive

- Daytime Running Lights
- Brake Lights
- Centre High Mount Stop Lights
- Side Turn Signals
- Emergency Stop Signal

### Interior Lights (Automotive & Avionics)

- Dashboard
- Map Lights
- Mood Lights

### LCD Backlighting

- TV
- Notebook/PC
- Cell Phones/Smart Phones

### Aviation Lighting

- Landing Lights
